## SAMPLING IN EDUCATIONAL RESEARCH

### SOME IMPORTANT TERMS IN SAMPLING

#### Population

By population we mean the aggregate or totality of objects or individuals regarding which inferences are to be made in a sampling study. A population is any group of individuals that have one or more characteristics in common that are of interest of the researcher.

#### Sample

A sample is a small proposition of a population selected for observation and analysis. By observing the characteristics of the sample, one can make certain inferences about the characteristics of the population from which it is drawn.

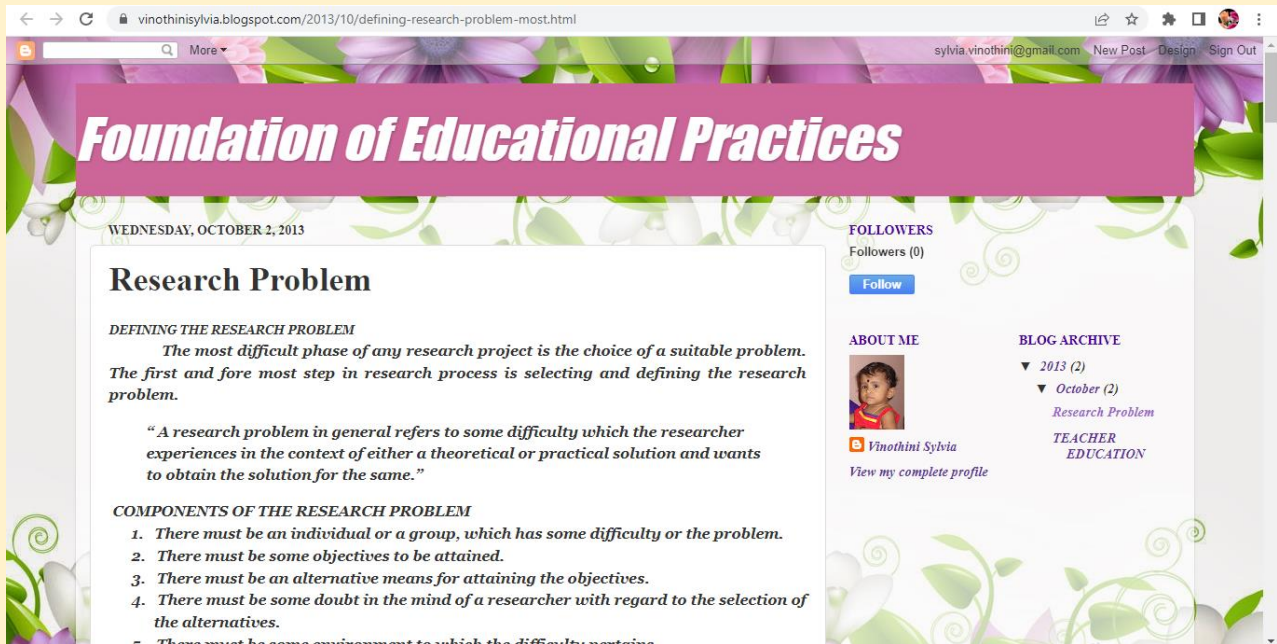

#### Sampling

It is the process of selection of sample from the population. For this purpose, the population is divided into a number of parts called sampling units.

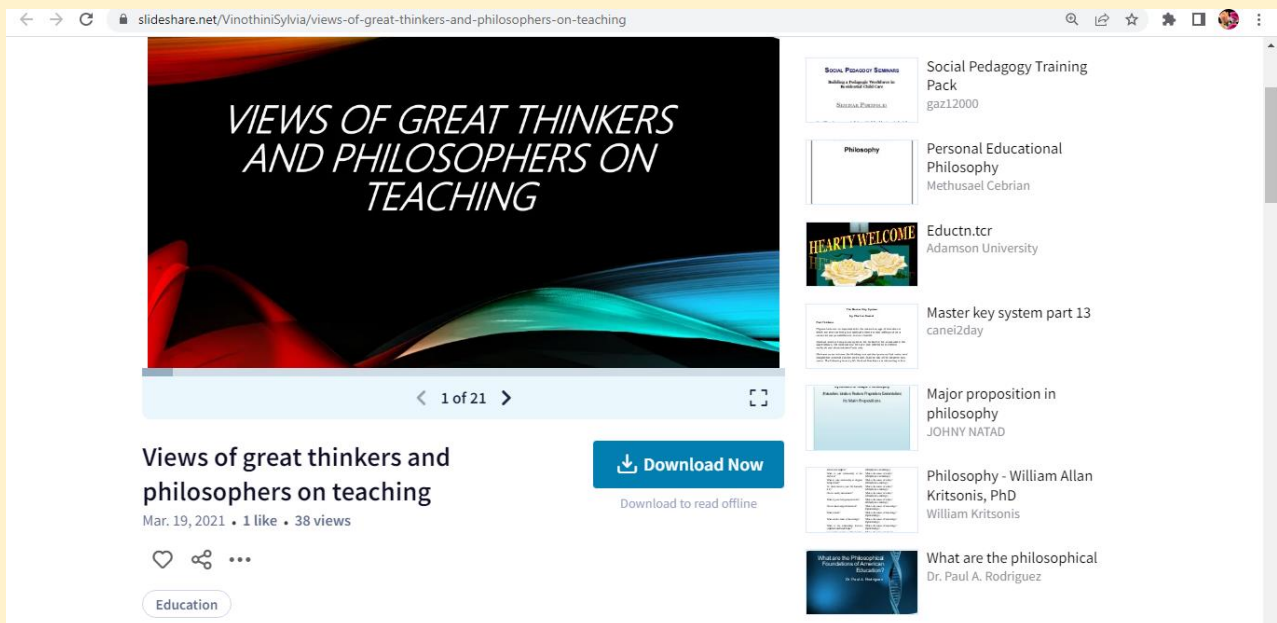

## BLOG CONTENT FOR M.ED. I YEAR FOR THE COURSE BASICS IN EDUCATIONAL RESEARCH

The screenshot shows a Slideshare presentation page. At the top, there is a navigation bar with a search icon and a message: "You have reached the end of your subscription preview this month. [Activate your 30 day free trial to unlock unlimited reading.](#)". Below this, the presentation content is displayed. The title is "Variables and Scaling Techniques" and it is part of "Unit IV" of "Basics in Educational Research". The content includes a definition of variables and examples of quantitative and qualitative variables. A "Download Now" button is visible. On the right side, there is a "Recommended" section with several other presentations listed, such as "Essential INFORMATION To Make It In A Stats Class" and "Statistics Module 2 & 3".
